

Yavuz Alp Bilen
Computer Engineer, Unity Developer

Ankara, Turkey / Warsaw, Poland | +90 530 857 58 78 | alpbilen@gmail.com

Portfolio: yavuzalpbilen.github.io | GitHub: github.com/yavuzalpbilen | LinkedIn: www.linkedin.com/in/yavuz-a-9243211a4/

Professional Summary

Computer Engineering graduate with a strong foundation in problem-solving, physics-based systems, and software development. Experienced in Unity and C# with a focus on simulation, optimization, and system design. Highly motivated to contribute to defense and aerospace technologies.

Technical Skills

Tools: Blender, GitHub, Perforce, Jira, Visual Studio, Figma, Git

Programming: C++, C#

Concepts: Data Structures, Algorithms, OOP

Simulation: Physics-based systems, Mathematical modeling

Engines: Unity, Unreal Engine 5

Spoken Languages: English (Fluent), German (Intermediate), Turkish (Native)

Projects

Advanced Projectile Simulation System – 2-Week Project, Solo Project, April 2026

Developed a physics-based projectile simulation system with adjustable speed, wind, and launch angle controls, predictive trajectory visualization, and reliable hit detection. Implemented manual and auto-aim modes, including interception logic for moving targets following a predefined XZ-plane path.

Ecdysis – Unity, C#, Blender – 4-Week Project, Team of 9, January 2026

In this 2.5D action platformer, you defeat enemies, consume their skills, and evolve to progress through new biomes. I led the core game loop and combat design, but primarily focused on environment and level design, such as placing enemies, balancing encounters, and shaping biomes so players naturally navigate and evolve through each stage.

Project Trash – Unity, C#, Blender – 3-Week Project, Team of 7, November 2025, Best Green Theme Game Award

In this arcade-style recycling game, you quickly sort and throw six types of waste into the correct bins, aiming for a high score. I designed the core gameplay concept, factory layout, and scoring system, and also contributed to coding the object sorting, scoring logic, and some hand movement mechanics.

ZUS Life Run – Unity, C# – 2-Day Project, Solo Project, September 2025, Best Advertising App Award

In this advertisement mobile game for ZUS Insurance, you guide a character's life from childhood to old age, balancing six stats through swiped decisions. I designed the narrative events and their stat effects, along with the core swiping mechanic linking choices to stats.

Professional Experience

Outlier AI - Software Engineer

May 2024 – January 2025 (9 months) - Remote

Ertürkler A.Ş. - Computer Engineer

April 2023 – December 2023 (9 months) - Ankara, Turkey

DİAS Teknoloji - Computer Engineer

July 2022 – Sep 2022 (3 months) - İstanbul, Turkey

DNS İnovasyon Sistemleri ve Teknoloji A.Ş. - Computer Engineer

May 2022 – July 2022 (3 months) - İstanbul, Turkey

Decentraland Foundation - Unity Developer

November 2021 – April 2022 (6 months) - Remote

Infopark Yazılım ve Danışmanlık - Software Engineer

July 2021 – Sep 2021 (3 months) - Ankara, Turkey

Education

CD Projekt Red X Futuregames - Game Designer Specialization

September 2025 – Present / Warsaw, Poland

Atılım University - B.S. Computer Engineering

September 2017 – July 2022 / Ankara, Turkey

Büyük Kolej

Interests and Activities

Events: HackYeah Hackaton 2025 Krakow, GlobalGameJam 2023 Ankara, and GlobalGameJam 2022 Ankara

Unity Development: I develop Unity simulations and their designs.
