Professional Summary

Game designer and programmer with 5+ years of game development experience, working with Unity and Unreal Engine 5. Developed games and prototypes, including three titles on Steam, with a focus on gameplay programming, game design, and environment and level design.

Technical Skills

Engines: Unity (5+ years), Unreal Engine 5 (2+ years)
Specialties: Level Design, Environment Art/Design, Level Blockouts, Gameplay Prototyping
Tools: Blender, GitHub, Perforce, Jira, Visual Studio, Figma
Programming & Scripting: C#, C++, Unreal Engine Blueprints
Spoken Languages: English (C2), German (B1), Turkish (Native)

Game Projects

Blacksmithkin - Unity, C#, Blender - Solo Development Steam ↗
In this first-person medieval blacksmithing game, you craft weapons and equipment, fulfill customer orders, and test your creations in arena combat. I designed and developed the crafting loop, including heating, hammering, quenching, and grinding, alongside customer order systems, equipment progression, workshop upgrades, and combat encounters with shielded opponents and bosses.

Veltarum - Unity, C#, Blender - Solo Development Steam ↗
In this fast-paced retro FPS, you combine firearms and sword dashes with sprinting, sliding, and wall-running to move through combat encounters. I designed and developed the movement and combat systems, time-slowing watch, boss encounters, and progression loop, including collecting crystals and purchasing upgrades to health, damage, dash distance, and the watch between lives.

Six Coins - Unity, C#, Blender - Solo Development Steam ↗
In this turn-based card game, you compete against three AI opponents, manage limited coins, and decide when to draw or stand to build the best hand each round. I designed and built the entire project, including the core gameplay loop, turn flow, hand-ranking system, coin-based risk structure, AI behavior, UI, and overall visual presentation, creating a clear and polished digital card game experience.

Project Trash - Unity, C#, Blender - Best Green Theme Game Award
In this arcade-style recycling game, you quickly sort and throw six types of waste into the correct bins, aiming for a high score. I designed the core gameplay concept, factory layout, and scoring system, and also contributed to coding the object sorting, scoring logic, and some hand movement mechanics.

Ecdysis - Unity, C#, Blender
In this 2.5D action platformer, you defeat enemies, consume their skills, and evolve to progress through new biomes. I led the core game loop and combat design, but primarily focused on environment and level design, such as placing enemies, balancing encounters, and shaping biomes so players naturally navigate and evolve through each stage.

Duel of the Fates - Unreal Engine, Blueprint, C++, Blender - Solo Development
Designed and developed a duel combat prototype built around three directional stances. Implemented stance-based attacks, directional blocking, and enemy behavior, while shaping the level layout to support timing, positioning, and clear one-on-one encounters.

Kingdom of Vulnar - Unity, C# - Solo Development
Designed and developed a wave-based tower defense prototype in Unity. Implemented enemy behavior, tower targeting and upgrades, and a resource economy, alongside the UI for purchasing, placing, and upgrading towers.

ZUS Life Run - Unity, C# - Best Advertising App Award
In this advertisement mobile game for ZUS Insurance, you guide a character's life from childhood to old age, balancing six stats through swiped decisions. I designed the narrative events and their stat effects, along with the core swiping mechanic linking choices to stats.

Professional Experience

Sacred Panic Games - Owner/Game Developer
Present

Outlier - Software Engineer
May 2024 – January 2025 (9 months) - Remote

Ertürkler A.Ş. - Computer Engineer
April 2023 – December 2023 (9 months) - Ankara, Turkey

DİAS Teknoloji - Computer Engineer
July 2022 – Sep 2022 (3 months) - İstanbul, Turkey

DNS İnovasyon Sistemleri ve Teknoloji A.Ş. - Computer Engineer
May 2022 – July 2022 (3 months) - İstanbul, Turkey

Decentraland Foundation - Game Developer
November 2021 – April 2022 (6 months) - Remote

Infopark Yazılım ve Danışmanlık - Software Engineer
July 2021 – Sep 2021 (3 months) - Ankara, Turkey

Education

CD Projekt Red X Futuregames - Game Designer Specialization
September 2025 – Present - Warsaw, Poland

Atılım University - B.S. Computer Engineering
September 2017 – July 2022 - Ankara, Turkey

Büyük Kolej

Events

Digital Dragons 2026 Krakow

Game Industry Conference 2026 Poznan

HackYeah Hackathon 2025 Krakow

Student Games Festival 2025 Warsaw

GlobalGameJam 2023 Ankara, and GlobalGameJam 2022 Ankara
